## House Republican Health Plan Would Shift \$1 Billion in Medicaid Costs to Utah

Utah would have to raise taxes or cut other parts of its budget by \$1 billion over ten years to maintain Utah Medicaid under the House Republican health plan, new Urban Institute estimates show. These estimates reflect the House Budget Committee-approved bill. Revisions to the bill may modify the cost shift to the state. Utah's program enables low-income seniors, children, and people with disabilities to get needed health care. And it helps parents and other adults stay healthy, work, and avoid medical debt.

The House plan (the American Health Care Act) would cut federal Medicaid funding for Utah by imposing a "per capita cap" on Medicaid, with the capped amounts set to grow more slowly over time than the actual growth in Utah's Medicaid costs.

If Utah didn't raise taxes or cut other budget areas like education, it would have to cut Medicaid eligibility, benefits, and/or payments to hospitals and physicians. These cuts could jeopardize the health and well-being of seniors, people with disabilities, children, and adults who rely on Medicaid today.

## How Capping Federal Medicaid Funds Would Affect State Budgets

States really only have three ways to cut costs to Medicaid:

 Cut Benefits
 Cut Enrollment
 Cut Payments to Providers

## 14 Million People Would Lose Medicaid Coverage Nationwide

The House plan would cut Medicaid funding nationwide by \$880 billion over the next ten years, with the cuts rising to 25 percent by 2026, the Congressional Budget Office estimates. This would cause 14 million people to lose Medicaid coverage.

The cuts would be most severe in states that have expanded Medicaid to low-income adults, many of which would end their expansions due to the deep federal cuts. But the per capita cap would cut federal funding for all states.

## Medicaid Helps Utah's Families

Utahns get comprehensive, affordable

health coverage through Medicaid.

Most are children, seniors, and people with disabilities.
