## In North Dakota, Safety Net Lifts Roughly 73,000 People Above Poverty Line and Provides Health Coverage to 38,000 Children

Children

Federal and state safety net programs lift an estimated 73,000 North Dakotans above the poverty line each year, reducing the poverty rate from 18.7 percent (before counting government benefits and taxes) to 7.7 percent. Many are children: the safety net lifts roughly 15,000 North Dakota children above the poverty line, reducing the child poverty rate from 15.9 percent to 5.8 percent.

All figures in this fact sheet reflect the most recent data of their kind available. The figures measure the combined impact of federal, state, and local policies, but federal programs account for the vast majority of poverty reduction in every state.

All ages

### **Impact of Largest Programs**

Social Security lifts more North Dakotans above the poverty line each year than any other program. "Means-tested programs," which tie eligibility to a person's income — such as SNAP (formerly food stamps) and the Earned Income Tax Credit — also reduce poverty considerably, especially among the non-elderly. In North Dakota:

- Social Security lifts an estimated 46,000 people most of them elderly above the poverty line and cuts the elderly poverty rate from 50.6 percent to 9.3 percent.
- **SNAP** lifts an estimated 14,000 people above the poverty line, and it makes many others less poor. Altogether, SNAP assists an average of 53,000 people a month, including about 24,000 children.
- Two working family tax credits, the Earned Income Tax Credit and the low-income part of the Child
  Tax Credit, help roughly 120,000 people, including 67,000 children. A reliable estimate of how many
  people these tax credits lift out of poverty is unavailable due to data limitations.
- Federal rental assistance helps 21,000 people; many other families eligible for assistance don't receive it due to funding limitations. A reliable estimate of how many people housing assistance lifts out of poverty is unavailable due to data limitations.

Safety net programs not only reduce immediate deprivation but also have long-term benefits for children, a growing body of research indicates. The findings suggest, for instance, that SNAP and the Earned Income Tax Credit help reduce infant mortality and low birthweight, and improve children's reading and math test scores, high school completion, college entry, and expected future earnings. The findings also indicate that housing assistance that helps low-income

# Higher Income for Poor Children Is Associated With Increased Work Hours and Earnings Later in Life

...is associated with an increase in their working hours between ages 25 and 37 of 135 hours a year and a 17% rise in their annual earnings.

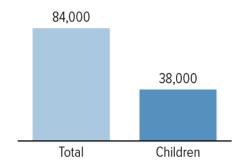

families move to safe, low-poverty neighborhoods with better schools can enhance their children's long-term prospects.

### **Health Coverage**

An estimated 84,000 North Dakotans have coverage through Medicaid or the Children's Health Insurance Program. (Health coverage provided through public programs doesn't count in determining a household's poverty status.) These programs are particularly essential to children's health, covering 38,000 of the state's children.

Obtaining access to health care through Medicaid has long-term benefits. People eligible for Medicaid coverage in childhood miss fewer school days due to illness or injury, are more likely to complete high school and college, and earn more as adults.

#### Medicaid and Children's Health Insurance Program Cover Large Numbers of North Dakota Children

**Data note:** The figures on people lifted out of poverty reflect a comprehensive poverty measure that includes cash benefits and income-like assistance such as SNAP and refundable tax credits, and adjusts for households' underreporting of benefits. The estimates average data over multiple years (in most cases 2009-2012) for increased reliability; 2012 is the latest year for which it is now possible to correct for underreporting. The figures modestly overstate the safety net's current overall anti-poverty impact, largely due to the subsequent decline in unemployment benefits. (The poverty-reduction figures for the EITC and low-income CTC, where adjustments for underreporting are not required, cover 2011-2013.)

The figures on program participation are the latest data available from program records – May 2016 for Medicaid, 2015 for SNAP and HUD and USDA housing programs, and 2013 for the EITC and CTC.
