INCOME INEQUALITY HAS INCREASED IN NEW MEXICO SINCE THE 1970s

Inequality has increased in New Mexico over the past two decades. This can be observed by ranking all New Mexico families according to their income level, dividing them into five groups (or fifths) of equal size, and calculating the average income of each fifth of families. This analysis shows by the late 1990s:

- The richest 20 percent of families had average incomes 9.8 times as large as the poorest 20 percent of families.
- The richest 20 percent of families had average incomes 2.7 times as large as the middle 20 percent of families.

The Long-Term Trend

Since the late 1970s, income inequality has increased in New Mexico. The economic growth of the 1980s and 1990s was not shared evenly among the poor, the rich, and the middle class. Instead, the top fifth of families fared substantially better than other income groups.

In the late 1970s, the richest 20 percent of families had average incomes 8.5 times as large as the poorest 20 percent of families. By the late 1990s, that ratio had grown to 9.8.

- The average income of the poorest fifth of families increased by \$40 between the late 1970s and the late 1990s, from \$10,920 to \$10,960.1
- The average income of the middle fifth of families increased by \$2,850 between the late 1970s and the late 1990s, from \$36,710 to \$39,560.
- The average income of the richest fifth of families increased by \$14,360 between the late 1970s and the late 1990s, from \$93,280 to \$107,640.

The Recent Trend

Over the past decade, income inequality has remained about the same in New Mexico.

- The average income of the poorest fifth of families increased by \$1,010 between the late 1980s and the late 1990s, from \$9,960 to \$10,960.
- The average income of the middle fifth of families increased by \$4,940 between the late 1980s and the late 1990s, from \$34,620 to \$39,560.
- The average income of the richest fifth of families increased by \$2,710 between the late 1980s and the late 1990s, from \$104,930 to \$107,640.1

¹The direction of this change is not statistically significant at the 95 percent level of confidence.
