

INCOME INEQUALITY HAS INCREASED IN MARYLAND SINCE THE 1970s

Inequality has increased in Maryland over the past two decades. This can be observed by ranking all Maryland families according to their income level, dividing them into five groups (or fifths) of equal size, and calculating the average income of each fifth of families. This analysis shows by the late 1990s:

- The richest 20 percent of families had average incomes 8.6 times as large as the poorest 20 percent of families.
- The richest 20 percent of families had average incomes 2.7 times as large as the middle 20 percent of families.

The Long-Term Trend

Since the late 1970s, income inequality has increased in Maryland. The economic growth of the 1980s and 1990s was not shared evenly among the poor, the rich, and the middle class. Instead, the top fifth of families fared substantially better than other income groups.

In the late 1970s, the richest 20 percent of families had average incomes 6.9 times as large as the poorest 20 percent of families. By the late 1990s, that ratio had grown to 8.6.

- The average income of the poorest fifth of families increased by \$3,620 between the late 1970s and the late 1990s, from \$17,290 to \$20,910.
- The average income of the middle fifth of families increased by \$12,680 between the late 1970s and the late 1990s, from \$53,160 to \$65,840.
- The average income of the richest fifth of families increased by \$60,840 between the late 1970s and the late 1990s, from \$119,960 to \$180,800.

The Recent Trend

Over the past decade, income inequality has remained about the same in Maryland.

- The average income of the poorest fifth of families increased by \$3,540 between the late 1980s and the late 1990s, from \$17,370 to \$20,910.
- The average income of the middle fifth of families increased by \$6,890 between the late 1980s and the late 1990s, from \$58,950 to \$65,840.
- The average income of the richest fifth of families increased by \$45,510 between the late 1980s and the late 1990s, from \$135,290 to \$180,800.

Maryland

Income Inequality Among Families In Maryland Has Increased Since the 1970s

Income Gaps, Late 1990s

	Rank (1 is most unequal)
Richest fifth vs. poorest fifth	31
Richest fifth vs. middle fifth	20

Income Gaps, Late 1990s

	Ratio
Richest fifth vs. poorest fifth	8.6
Richest fifth vs. middle fifth	2.7

Inflation-Adjusted Change in Incomes Late 1970s to Late 1990s

	Dollar Change	% Change
Poorest Fifth . . .	3,620 *	21.0% +
Middle Fifth	12,680 *	23.9% +
Richest Fifth	60,840 *	50.7%

Income Changes for Maryland Families Late 1970s to Late 1990s, by Fifth of Families

Percentage change

Inflation-Adjusted Change in Incomes Late 1980s to Late 1990s

	Dollar Change	% Change
Poorest Fifth . . .	3,540 *	20.4%
Middle Fifth	6,890 *	11.7% +
Richest Fifth	45,510 *	33.6%

Income Changes for Maryland Families Late 1980s to Late 1990s, by Fifth of Families

Percentage change

* Change is statistically significant at the 95% confidence level.

+ Difference between this change and the percent change in the income of the top fifth is statistically significant at the 95% confidence level.
