

# More Housing Vouchers Needed to End Homelessness

Safe, stable, and affordable housing remains out of reach for millions in the U.S., which can undermine their health and safety. The first and most [effective step](#) in addressing the nation's homelessness crisis is to provide a Housing Choice Voucher for every eligible household. At minimum policymakers should use [recovery legislation](#) to significantly expand the [Housing Choice Voucher](#) program.

Vouchers have proven [highly effective](#) at keeping people with low incomes stably housed and at reducing homelessness and overcrowding. Vouchers typically help families rent, in the private market, a modest unit they choose in the neighborhood they choose. Families pay about 30 percent of their income for rent and utilities and the voucher covers the rest, up to a cap based on local market rents.

Vouchers deliver major benefits to over 5.3 million people, more than any other rental assistance program. But they could do much more if made available to the millions now eligible but unassisted due to inadequate funding. Unlike entitlement programs such as Medicaid, rental assistance does not expand automatically to cover all who qualify. Just 1 in 4 families eligible for rental assistance receive it, and [waiting lists](#) for vouchers are years-long in much of the country.

Giving vouchers to everyone eligible would lift 9.3 million people above the poverty line, [one study](#) found, reducing the overall poverty rate by more than a fifth and the child poverty rate by over a third. Expanding vouchers would also:

## 1. Sharply Reduce Homelessness and Advance Equity

More than [580,000 people](#) were staying in homeless shelters or living on the street on a single night in January 2020, before the COVID-19 pandemic. Nearly 1.45 million people experienced [sheltered homelessness](#) sometime in 2018, and unsheltered homelessness has risen every year since 2015 (see Figure 1). And in 2020, for the first time since the Department of Housing and Urban Development began collecting these data, there were fewer *sheltered* individuals (49 percent) experiencing homelessness than *unsheltered* (51 percent).

Also, our nation's long history of racism has created disparities in education, employment, and housing. People of color [disproportionately face](#) high rent burdens, evictions, overcrowding, and homelessness. Black and Latinx people were a respective 13 and 18 percent of the U.S. population in 2020, but 40 and 23 percent of those experiencing homelessness.

Significantly expanding vouchers would be transformative, enabling communities to create a homelessness response system that quickly rehuses people, eventually making homelessness brief and rare. It would also advance equity for Black and Latinx people — lowering their respective household poverty rate gaps with white households by over a third and nearly half — and for LGBTQ people and other groups with much higher homelessness rates than the general public.

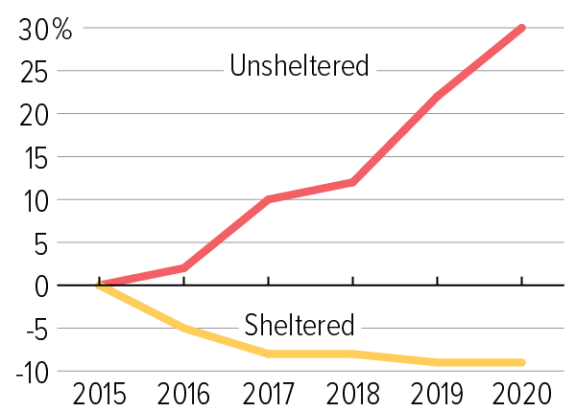

## 2. Improve Outcomes for Homeless Youth and Families

Expanding vouchers to everyone eligible would lift millions of children out of poverty, cutting child poverty by a third; improve educational outcomes; and provide a brighter path to adulthood. About half a million people in households with children used an emergency shelter or transitional housing between October 2017 and September 2018; 62 percent were

children, nearly 30 percent of whom were under age 5. Some 113,000 unaccompanied youth experienced sheltered homelessness.

[Rigorous research](#) shows that for homeless families, vouchers reduce housing instability, family separations, domestic violence, and food insecurity (see Figure 2), as well as school absences, behavioral problems, and how often children change schools.

FIGURE 2

### Vouchers Reduce Hardship for Homeless Families

Note: The control group consisted of homeless families who were not offered vouchers or other assistance under the study.

\*These data are the results reported 20 months into the HUD Family Options Study. All the other chart data are from the completed 3-year study

Food insecurity = Someone in the household had inadequate access to food at some point during the year.

Housing instability = Family reported spending at least one night homeless or doubled up in the past six months or stayed in an emergency shelter in the past year.

And vouchers give families more choices about where they live, improving access to high-opportunity neighborhoods with more resources and in turn to improved outcomes for children. A [long-term study](#) found that children whose families used vouchers to move from high- to low-poverty neighborhoods – which often have better-resourced, higher-performing schools – had substantially higher adult earnings and rates of college attendance than similar children whose families stayed in low-income neighborhoods. Adults in these moving families also experienced better health outcomes.

## 3. Provide Stability for Homeless Seniors and People With Disabilities

Voucher expansion is critical to ending homelessness for the hundreds of thousands of seniors and people with disabilities experiencing it each year. About half of adults – and two-thirds of veterans – living in homeless shelters reported having a disability in 2018. Over [three-quarters](#) of people experiencing unsheltered homelessness report having a physical or mental health condition. And chronic homelessness – by definition affecting people with disabilities – has been rising (see Figure 3), as has homelessness in many parts of the country among people 55 and older, who have higher rates of disability or chronic illness. Some [researchers expect](#) homelessness to continue growing for older people in the next decade unless access to affordable housing greatly improves.

## What Is Chronic Homelessness?

A person is chronically homeless if they...

Have a disability

and

are homeless for over a year *or* more than 4 times within 3 years

**1 in 5**

of people experiencing homelessness are chronically homeless

**64%**   
of chronically homeless people are unsheltered

Unsheltered, chronic homelessness rose by

**21%** in one year

Note: "Unsheltered" refers to people whose primary nighttime location is a public or private place not meant as a regular sleeping accommodation, such as streets, vehicles, or parks. Data for one-year rise are for Jan. 2019-2020.

Rental assistance and short-term support in navigating the rental market are enough for most people to regain long-term housing stability. However, some seniors and people with disabilities will need [supportive housing](#), an evidence-based solution that pairs rental assistance with services such as intensive case management, ongoing housing navigation, and physical and behavioral health services for those who want them. Supportive housing can improve access to quality health care, reduce use of costly systems like emergency health services or nursing homes, and reduce incarceration. This is critical as homelessness can worsen physical and mental health. Homelessness can disrupt access to care because people experiencing it often lack access to reliable mailing addresses, a phone, or a computer to stay in contact with health care providers.

Vouchers are particularly well-suited for increasing access to supportive housing. Vouchers can be tenant-based, letting people choose a unit on the private market, or project-based, meaning the rental assistance is tied to specific units. Having vouchers readily available would help communities create a variety of integrated housing options — including supportive housing — so that older adults and people with disabilities can choose one that meets their needs without being isolated from the community.
