

INCOME INEQUALITY HAS INCREASED IN NEVADA SINCE THE 1970s

Inequality has increased in Nevada over the past two decades. This can be observed by ranking all Nevada families according to their income level, dividing them into five groups (or fifths) of equal size, and calculating the average income of each fifth of families. This analysis shows by the late 1990s:

- The richest 20 percent of families had average incomes 8.8 times as large as the poorest 20 percent of families.
- The richest 20 percent of families had average incomes 2.9 times as large as the middle 20 percent of families.

The Long-Term Trend

Since the late 1970s, income inequality has increased in Nevada. The economic growth of the 1980s and 1990s was not shared evenly among the poor, the rich, and the middle class. Instead, the top fifth of families fared substantially better than other income groups.

In the late 1970s, the richest 20 percent of families had average incomes 6.5 times as large as the poorest 20 percent of families. By the late 1990s, that ratio had grown to 8.8. The gap between the rich and the middle class also increased. This increase was the seventh greatest in the nation.

- The average income of the poorest fifth of families increased by \$290 between the late 1970s and the late 1990s, from \$16,160 to \$16,440.¹
- The average income of the middle fifth of families increased by \$3,550 between the late 1970s and the late 1990s, from \$46,240 to \$49,790.
- The average income of the richest fifth of families increased by \$39,430 between the late 1970s and the late 1990s, from \$104,480 to \$143,920.

The Recent Trend

Over the past decade, income inequality has increased in Nevada.

In the late 1980s, the richest 20 percent of families had average incomes 6.9 times as large as the poorest 20 percent of families. By the late 1990s, that ratio had increased to 8.8. This increase in inequality was the fifth greatest in the nation. The gap between the rich and the middle class also increased. This increase was the third greatest in the nation.

- The average income of the poorest fifth of families increased by \$380 between the late 1980s and the late 1990s, from \$16,060 to \$16,440.¹
- The average income of the middle fifth of families increased by \$3,630 between the late 1980s and the late 1990s, from \$46,160 to \$49,790.
- The average income of the richest fifth of families increased by \$32,450 between the late 1980s and the late 1990s, from \$111,470 to \$143,920.

¹ The direction of this change is not statistically significant at the 95 percent level of confidence.

Nevada

Income Inequality Among Families In Nevada Has Increased Since the 1970s

Income Gaps, Late 1990s

	Rank (1 is most unequal)
Richest fifth vs. poorest fifth	28
Richest fifth vs. middle fifth	9

Income Gaps, Late 1990s

	Ratio
Richest fifth vs. poorest fifth	8.8
Richest fifth vs. middle fifth	2.9

Inflation-Adjusted Change in Incomes Late 1970s to Late 1990s

	Dollar Change	% Change	
Poorest Fifth . . .	290	1.8%	+
Middle Fifth	3,550 *	7.7%	+
Richest Fifth	39,430 *	37.7%	

Income Changes for Nevada Families Late 1970s to Late 1990s, by Fifth of Families

Percentage change

Inflation-Adjusted Change in Incomes Late 1980s to Late 1990s

	Dollar Change	% Change	
Poorest Fifth . . .	380	2.4%	+
Middle Fifth	3,630 *	7.9%	+
Richest Fifth	32,450 *	29.1%	

Income Changes for Nevada Families Late 1980s to Late 1990s, by Fifth of Families

Percentage change

* Change is statistically significant at the 95% confidence level.

+ Difference between this change and the percent change in the income of the top fifth is statistically significant at the 95% confidence level.
