

Pennsylvania's Cuts to Higher Education Threaten Access and Equity

High-quality, affordable, and accessible public higher education is critical to building a prosperous and strong state economy, where the benefits of higher education are broadly shared and felt by every community regardless of race or class. But state support of public colleges and universities in Pennsylvania has fallen short, with overall per-student funding for public two- and four-year colleges in the 2018 school year at a lower level than it was in 2008, after adjusting for inflation.

A Decade of Funding Cuts and Tuition Hikes: 2008-2018

Per-student funding for Pennsylvania's public colleges and universities is 34% below 2008 levels.

Since 2008, average tuition in Pennsylvania is up by \$3,006 for four-year public colleges and universities.

The \$2,541 cut in per-student funding and tuition increases have made college less affordable, shifting costs from the state to students and jeopardizing quality at public universities.

Families Have Been Hard-Pressed to Absorb Rising Tuition Costs

The cost shift from states to students has happened over a period when many families have had trouble absorbing additional expenses due to stagnant or declining incomes. Nationally, tuition jumped 37 percent between the 2008 and 2018 school years, while real median income grew just 1.8 percent.

In 2017, the average net price — that is, published tuition and fees, room and board, and books and supplies minus the average aid received for a student — at a public four-year institution accounted for 23 percent of a family's median household income. For families of color — whose members often face additional barriers to employment and difficulty accessing better-paying jobs — the burden of college costs is particularly heavy.

Pennsylvania's average net price of attendance at a public 4-year university as a share of median household income by race, 2017

*Median income is statistically different from that of non-Hispanic white households.
