

State Higher Education Funding Remains Below Pre-Recession Levels

High-quality, Affordable Colleges and Universities Key to States' Workforces and Economies

Higher education funding remains well below pre-recession levels in almost all states, a new CBPP report shows. As a result, colleges and universities have had to raise tuition and make spending cuts that may diminish the quality of education available to students at a time when a highly educated workforce is more crucial than ever to the nation's economic future.

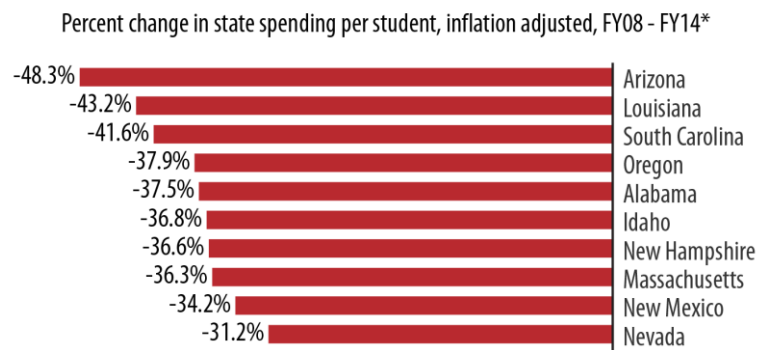

"The jobs of the future will require college-educated workers," said Michael Mitchell, policy analyst at the Center on Budget and Policy Priorities and author of the report. "For the sake of their economies and their future workforces, states should start reinvesting in its colleges and universities now."

Most states have begun in the past year to restore some of the cuts they made to higher education funding after the recession hit. Spending is up by roughly \$450 per student, or 7 percent, on average, among states that have increased higher education funding.

Still, states are spending 23 percent less per student nationwide this year than they did in 2008. Thirty-seven states have cut per-student funding by more than 20 percent since the start of the recession, with per-student funding in Arizona, Louisiana, and South Carolina down by more than 40 percent during this period.

Eight states cut per-student higher education funding further this year even as the economy recovers and revenues have returned to pre-recession levels.

Ten States With Largest Percentage Cuts to Higher Education Funding

Source: CBPP calculations using data from Illinois State University's annual Grapevine Report and the State Higher Education Executive Officers Association. Because enrollment data is only available through the 2013 school year, enrollment for the 2013-14 school year is estimated using data from past years.

Deep Cuts Have Had Major Consequences for Schools and Students

Public colleges and universities across the country have raised tuition to help make up for declining state investment in higher education. Annual published tuition at four-year public colleges has risen by \$1,936, or 28 percent, since the 2007-08 school year, after adjusting for inflation. In Arizona, published tuition at four-

year schools is up more than 80 percent, while in two other states — Florida and Georgia — published tuition is up more than 66 percent.

These sharp increases in tuition have accelerated longer-term trends of reducing college affordability and shifting costs from states to students and their families. Federal student aid and tax credits have risen, but on average they have fallen short of covering the tuition increases. The tuition increases have contributed to a swelling in student debt levels since the start of the recession — up 20 percent for the average bachelor's degree recipient.

“High levels of student debt are a major problem, and rapidly rising tuition is scaring some students away from enrolling in college altogether,” said Mitchell. “States can help relieve students of crippling debt and keep college affordable for students and their families by re-investing in public colleges and universities.”

Tuition increases have compensated for only part of the revenue loss resulting from state funding cuts. Public colleges and universities have cut faculty positions, eliminated course offerings, closed campuses, shut computer labs, and reduced library services, among other cuts. For example, since 2008, the University of North Carolina at Chapel Hill has eliminated 493 positions, cut 16,000 course seats, increased class sizes, cut its centrally supported computer labs from seven to three, and eliminated two distance education centers.

States' Budget Choices Will Determine Whether They Can Successfully Rebuild Their Higher Education Systems, Strengthen Economies in Long Run

A large and growing share of future jobs will require college-educated workers. Sufficient funding for higher education to keep tuition affordable and quality high at public colleges and universities, and to provide financial aid to those students who need it most, would help states to develop the skilled and diverse workforce they will need to compete for these jobs.

Such funding is unlikely to occur, however, unless policymakers make sound tax and budget decisions in the coming years.

“To ensure that public colleges and universities are a place where middle-class and low-income students can receive a high-quality and affordable education, states need to reject calls for tax cuts,” said Mitchell. “Some will need to consider options for new revenues.”
