THE FOOD STAMP PROGRAM IN WISCONSIN

The Food Stamp Program has made severe hunger rare in America. In the late 1960s, medical research exposed the fact that American children suffered and died from diseases related to severe malnutrition that usually are thought of as occurring only in third-world countries. In 1979, after the Food Stamp Program became available nation-wide, physicians discovered that this severe malnutrition had become rare, a result they attributed to the Food Stamp Program. The Food Stamp Program is the largest anti-hunger program in Wisconsin.

FOOD STAMPS HELP VULNERABLE WISCONSIN RESIDENTS AND THE ECONOMY

- 382,770 Wisconsinites use food stamps to buy food every month.¹ That amounts to seven percent of the people in Wisconsin.
- Wisconsin food stamp households receive, on average, \$0.88 per person per meal in food stamp benefits. This modest amount is crucial to financially pressed families.
- The Food Stamp Program pumped \$363,438,137 into the Wisconsin economy last year, benefiting farmers, grocers, and small businesses throughout the state.²
- About 82 percent of Wisconsin food stamp benefits go to households with children, many of them in working families.³ Most of the rest go to households containing elderly people or people with disabilities.

FOOD STAMPS HELP PEOPLE THROUGH HARD TIMES

- During the recent rough economy, Food Stamp Program participation in Wisconsin increased. In 2000, an average of 193,021 Wisconsinites received food stamps each month. That number rose steadily to 382,770 in 2007, an increase of 98 percent.⁴
- Using the flexibility provided in the Food Stamp Act, the U.S. Department of Agriculture (USDA) is able to quickly issue disaster food stamps to people that survive hurricanes, tornadoes, or other natural disasters.

¹ FY2007 average monthly participation, the most recent full year for which data is available. In February 2008, the most recent month for which USDA has published data, there were 410,210 participants in the state, but this data is preliminary and monthly data can fluctuate significantly. For the most recent month see: <http://www.fns.usda.gov/pd/29fslatest.htm>.

UNMET NEED REMAINS

- Still, about 35.5 million Americans have difficulty affording food. An estimated 201,000 households in Wisconsin live with hunger or the threat of hunger, according to USDA.⁵ That includes low-income working families and senior citizens living on fixed incomes.
- One in six children (17 percent) lives in families that have difficulty affording adequate food, according to USDA.⁶ A household with a child under six is about twice as likely to suffer from food insecurity as a household with no children.
- Nationally, only 65 percent of those eligible for food stamps receive them. In Wisconsin, the participation rate is estimated to be 59 percent.⁷
- Increasing the share of eligible households that participate in the Food Stamp Program by just five percentage points, Wisconsin would provide food stamps to an additional 27,000 low-income Wisconsinites, bring \$12.2 million into Wisconsin's local economy, and result in \$22.4 million in new economic activity.⁸
