THE FOOD STAMP PROGRAM IN WEST VIRGINIA

The Food Stamp Program has made severe hunger rare in America. In the late 1960s, medical research exposed the fact that American children suffered and died from diseases related to severe malnutrition that usually are thought of as occurring only in third-world countries. In 1979, after the Food Stamp Program became available nation-wide, physicians discovered that this severe malnutrition had become rare, a result they attributed to the Food Stamp Program. The Food Stamp Program is the largest anti-hunger program in West Virginia.

FOOD STAMPS HELP VULNERABLE WEST VIRGINIA RESIDENTS AND THE ECONOMY

- 269,343 West Virginians use food stamps to buy food every month.¹ That amounts to 15 percent of the people in West Virginia or one in seven West Virginians.
- West Virginia food stamp households receive, on average, \$0.95 per person per meal in food stamp benefits. This modest amount is crucial to financially pressed families.
- The Food Stamp Program pumped \$274,884,537 into the West Virginia economy last year, benefiting farmers, grocers, and small businesses throughout the state.²
- About 75 percent of West Virginia food stamp benefits go to households with children, many of them in working families.³ Most of the rest go to households containing elderly people or people with disabilities.

FOOD STAMPS HELP PEOPLE THROUGH HARD TIMES

- During the recent rough economy, Food Stamp Program participation in West Virginia increased. In 2000, an average of 226,897 West Virginians received food stamps each month. That number rose steadily to 269,343 in 2007, an increase of 19 percent.⁴
- Using the flexibility provided in the Food Stamp Act, the U.S. Department of Agriculture (USDA) is able to quickly issue disaster food stamps to people that survive hurricanes, tornadoes, or other natural disasters.

¹ FY2007 average monthly participation, the most recent full year for which data is available. In February 2008, the most recent month for which USDA has published data, there were 274,487 participants in the state, but this data is preliminary and monthly data can fluctuate significantly. For the most recent month see: <http://www.fns.usda.gov/pd/29fslatest.htm>.

UNMET NEED REMAINS

- Still, about 35.5 million Americans have difficulty affording food. An estimated 68,000 households in West Virginia live with hunger or the threat of hunger, according to USDA.⁵ That includes low-income working families and senior citizens living on fixed incomes.
- One in six children (17 percent) lives in families that have difficulty affording adequate food, according to USDA.⁶ A household with a child under six is about twice as likely to suffer from food insecurity as a household with no children.
- Nationally, only 65 percent of those eligible for food stamps receive them. In West Virginia, the participation rate is estimated to be 80 percent.⁷
- Increasing the share of eligible households that participate in the Food Stamp Program by just five percentage points, West Virginia would provide food stamps to an additional 16,000 low-income West Virginians, bring \$7.8 million into West Virginia's local economy, and result in \$14.4 million in new economic activity.⁸
